Submission:

- Moodle, other types of submission, or late submission is not allowed
- Collaboration and Cheating Policy
  - “We strongly encourage students to form study groups, and discuss the lecture notes and lab assignments. However, the answers that you submit should be your own work. For the programming exercises, you are welcome to discuss them with other students, discuss specific algorithms, properties of algorithms, etc.; we ask only that you not look at any source code written by a different student, nor show your solution code to other students. **You are also not allowed to post your code publicly on github**” (from Coursera)
  - If your codes are similar to your friends’ codes codes from the Internet, you will get 0 points for total course result.
- If you miss 5 homework, your lab score will also be zero.
